

**TITLE: Borsa Istanbul Mehmet Akif Ersoy Vocational and Technical High School Ankara/Turkey** teachers in the Erasmus+ project "New Methods and Technologies for the post pandemic School Education System to counter learning obstacles".

Relevant to key action 2 (KA210), the project is a cooperation action between institutions and organisations, with the Istituto Comprensivo A.Toscanini as leader, two foreign partner schools namely CEIP LOS MORALES of Malaga (Spain) and Borsa İstanbul Mehmet Akif Ersoy in Ankara (Turkey) and two training institutes Previform in Ponte de Lima (Portugal) and Xient GmbH in Cologne (Germany).

The project is divided into two modules, the first of which, INTEGRATED METHODS FOR TEACHING, aims to train teachers in the digital transition in primary and secondary schools through mobility in Portugal, integrating teaching practices that combine traditional methods with digital, to make teaching functional also in consideration of the widespread difficulties linked to specific learning disorders. The CANVA method applied in the education received was transferred to the teachers and students in our school.

The path promoted by the Portuguese training center Previform engaged the teachers from Turkey together with the Spanish and Italian colleagues from May 19<sup>th</sup> until May 23<sup>rd</sup> and included: training course on the use of Canva +++(add), round tables and analysis workshops and comparison of traditional and digital methodologies applied to teaching.

Our teachers returning from the mobility will try to disseminate the trainings they received in order to bring a common understanding of education at both national and European level.

In the next academic year, the Technological Tools for Post-COVID Learning Disabilities II Module will be attended in Germany.
